Important: For each Question you must add you name and the question number as a comment at the top of the file.

Question 1

Write a program to accept an integer. Check if the value entered is:

- Equal to 100
- Greater than 100
- Less than 100
- Greater than or equal to 100
- Less than or equal to 100
- Not equal to 100

Question 2

Write a program to check whether a given number is even or odd.

Question 3

Write a program to take in two values and swap them

Question 4

Write a program to take in five values and print the average

Question 5

Write a program to read in the base, width and height of a parallelogram and print it's area and perimeter.

- The area is the length by the height
- The perimeter is 2*length + 2* width

Question 6

Write a program to implement the following:

Happy days are those that are sunny, on a weekend [saturday / sunday], or occur on an even date.

Sad days are those that are rainy, on a weekday, or occur on an odd date.

Ask the user to enter a choice of "weather", "day", or "date". Depending on what they enter, ask them to enter (sunny or rainy), a day (Monday - Sunday) or date and return whether it's a happy day or sad day.

Question 7

Write to take in two numbers A and B and implement the following:

- If A is not equal to B and A and B are both odd - then output 'A and B are different and are odd'
- Else if A is not equal to B and A and B are both even - then output 'A and B are different and are even'
- For every other value of A and B, output 'Doesn't matter'
